Centre Cultural de Taiwan a Paris

Bureau de Représentation de Taipei en France

Introduction

Urban Journal is a location sensitive mobile media art piece that facilitates interaction and exchange between people. New media technologies, such as the mobile phone, overlay older forms of communication to constitute a new type of urban space in the form of a social communication matrix. The sending of text messages (**SMS**) via mobile phones has become a ubiquitous component of such communication practices, enabling every inhabitant with access to a phone to take part in the **Urban Journal** by recording their daily impressions and forwarding them via their mobile phone.

This phenomena creates a shared cultural platform and through its global media dissemination this leads to the local region entering a global city dialogue.
CAMAC/Centred'Art Marnay Art Centre，France, Aug 2007

Project Statement

The entire *Urban Journal* Project will be publicly accessible. All SMS text submissions are received by a message server with a built-in **GMS card**, via an Internet connection. The keyword, the location, is sent to **Google Earth** and the satellite image projected in the presentation space. The editorial agency has constant access to the data, independent of location, in order to release it for the presentation. Following editorial release, **SMS** contributions are triggered in the order they are received and converted into the presentation.

The presentation occurs in a public space and visitors in the space may be both viewers and creators. While the projector moves our view rapidly across the globe, in directions we cannot choose, we can decide where to stop, by clicking the wireless mouse on the **Urban Journal logo** that appears on the **place** of each **SMS** message received.

Clicking reveals the story sent and an image – two images, in fact – a more detailed overview of the **place** and a **photo** – again selected via the **keyword location**, from **Flickr** – this photo can be sent with the message and will appear because of the exact keywords. If no photo is sent a random image is displayed, based on location.

While in the space people can text their own story and see it, not instantly, but quickly. But the other stories they see, from other locations, they cannot be sure if the person who sent it is in the place they say or standing next to them.

All stories and images will be archived on the project website.

Urban Journal involves a broad-ranging audience, their participation and interaction uses a motion news brief to exchange the transmission of news, to text message their personal conditions, aspirations, dreams, memories, ideas and opinions. In the presentation they can fall across the world, and fall into the stories of others.

Chun-chi Wang - BIOGRAPHY
Born in Taipei, Taiwan, Chun-chi Wang has been living in New York since 1992. She received a B.F.A from The Pratt Institute and an M.A from The New York Institute of Technology. In 1997 she start created virtual reality environments as an exploration into the perceptual and emotional aspects of real-time 3d technology. In 2000 she created the virtual actor, Hiakru, whose first assignment was broadcasting the latest art news, with information drawn from databases. Her work has been included in exhibitions in Europe and the United States, including at PS1 in New York, and she has also published two books, the Futurists Guide to the Web in 2002 and Softimage Design Guide in 2001.In 2007 her work "Urban Journal" award the Grand Prize Winners of 2nd Taipei Digital Art Festival. Now based in Taipei and Europe, Wang is continuing to explore connections between people and technology, how each affects the other.
